Coding Assessment – Pipeline Creation in Azure DevOps & Azure Data Factory

Steps to Create Pipeline in Azure DevOps :

1. **Go to Pipelines** → In your Azure DevOps project, click **Pipelines** → **New Pipeline**.
2. **Select Code Source** → Choose repo (Azure Repos, GitHub, etc.).
3. **Choose Pipeline Type:**
 - **YAML** → Modern, code-based (azure-pipelines.yml).
 - **Classic Editor** → GUI drag-and-drop tasks.
4. **Define Pipeline:**
 - In YAML → Add build/test/deploy steps.
 - In Classic → Add tasks (Build, Test, Publish).
5. **Save & Run** → Commit YAML or save pipeline, then run it.
6. **Monitor** → Check logs, artifacts, and results.

Steps to Create Pipeline in Azure Data Factory :

1. **Open ADF Studio** → In the Azure Portal, go to your Data Factory resource and click **Author & Monitor**.
2. **Create New Pipeline** → In the **Author** section, click the + button → select **Pipeline**, and give it a name.
3. **Add Activities** → From the Activities pane, drag and drop activities (e.g., Copy Data, Data Flow, Notebook) onto the canvas.
4. **Configure Settings** → For each activity, select or create **Linked Services** (connections) and assign **Datasets** (source/sink), then configure paths, queries, or mappings.
5. **Validate Pipeline** → Click **Validate All** to check for configuration errors and resolve issues.
6. **Debug/Test** → Run the pipeline in **Debug mode** to test execution and verify results.
7. **Publish Pipeline** → Click **Publish All** to save and deploy the pipeline.
8. **Trigger & Monitor** → Add a **Trigger** (manual, schedule, or event-based) to run the pipeline and monitor execution in the **Monitor** tab.
